-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Kowalski (4,769,052).

Kowalski teaches a filter wrap (84) for a cylindrical filter comprising a tubular sheet (128) having an interior side initially facing the filter when the sheet is wrapped on the filter, an exterior side and an edge defining a main opening to the interior for receiving the filter (see details of Fig. 6), and at least one strap (106) having one end attached to the sheet near the edge and an accessible distal end wherein pulling the straps everts the sheet as it is pulled off the filter. Kowalski further teaches the filter wrap comprising a plurality of straps (106) and the straps (106) are uniformly spaced and attached to the edge (102) around the circumference of the sheet (see Figs. 2-6, col. 4, lines 21-29 and line 40 through col. 5, line 20). Kowalski also teaches a method of using a filter wrap comprising the steps of providing the wrap in a rolled up toroid state, installing the wrap by axially rolling the wrap down the sides of a cylindrical filter to extend the wrap along the sides of the filter, an edge of the filter defining a main

opening of the rolled out interior of the wrap being disposed at a far end of the filter, and removing the wrap from the filter by pulling on at least one strap attached to the wrap in the vicinity of the edge so that the edge is pulled from the far end and along the exterior of the wrap until wrap is everted (see details of Fig. 6, col. 6, line 3 through col. 7, line 7).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Duffy et al (6,579,336 B1) disclose a reversed cube air filter assembly.
